# COVID 19 REPORT Background

In early 2020, the outbreak of the COVID-19 virus triggered a global public health crisis. Although restricting the movement of people is a crucial step to contain the spread of the virus, it has seen a substantial contraction in economic activity throughout the country. The health crisis and the shutdown of a significant proportion of the economy is expected to result in a prolonged period of recession, with multiple sectors facing long term affects. One sector in particular, initially affected from the pandemic in Ireland, was construction. In late March, up until late May this year, the country saw the closure of a large percentage of active sites and the requirement for new Standard Operating Procedures created to ensure safe return to sites and that these sites could remain open during the pandemic in the longer term.

To alleviate the pressure on the Health Service Executive (HSE) and hospitals being overwhelmed with cases throughout 2020 and beyond, the HSE progressed the setting up and planning of COVID-19 emergency facilities at hospitals across the country.

Given the timeliness of these facilities for hospitals there is no requirement for these projects to go through a traditional planning process. These schemes largely comprise modular buildings, installations, minor refurbishments and material alterations to existing areas of a hospital. They are generally completed within an 8-12 week period on average.

Since the start of the pandemic 150+ dedicated covid facility projects have commenced in the Republic of Ireland and with a potential surge in recent weeks and in to the new year, we envisage more facilities commencing on site to alleviate the burden on hospitals and our exceptional front line workers in managing the pandemic, as we await the introduction of a vaccine.

**\*Information correct as of the 24th November 2020**

# COVID 19 REPORT OVERVIEW

In this complementary report we explore the ongoing construction projects in the Medical Sector happening all around the country in response to the challenges of the Covid-19 pandemic. We feel this is an important report to share with the wider construction industry and an opportune time to highlight the schemes that have started, are ongoing and will begin and that will be closely tracked and monitored on an ongoing basis.

To date, the CIS Research team has identified 150 projects that have started since March and that are spread across the country. In the Eastern & Midlands region there are 53 projects, in the Northern & Western region there are 44 and in the Southern region there are a total of 53 projects.

The graphs included highlight the project starts in each month since March and are also broken down into which regions they reside. In each of the projects we provide the location, project description and start date along with who the Promoter and Main Contractor are on the schemes.
