# COMMERCIAL, RETAIL & HOSPITALITY

## PIPELINE

### Q1 2020

Planning permission granted in Q1 2020 in the Commercial, Retail and Hospitality Sector showed a healthy 37% increase in investment from the same period last year despite a decline in the overall number of projects and a 15% fall in floor area. The rise to €662m was a welcome return to growth in a sector that was generally in decline over 2019.

The largest project was the €180m [Opera Site in Limerick](#) granted permission in February.

Office developments alone accounted for nearly 50% of the rise in project values. Hotel beds showed a 51% decline from the same period last year with a total of 555 beds approved for development over 18 projects. In the restaurant sector there were signs of increased activity with 43 projects granted planning - a 26% increase from Q1 2019.

## REGIONS

### EASTERN AND MIDLAND (49% BY VALUE)

- 3% fall in project value from Q1 2019

## METHODOLOGICAL NOTES

- CIS monitor construction activity in Ireland at project level. Our team of researchers track major projects from planning to completion and gather relevant data and metrics. The analysis in this report excludes self-build projects. Whilst we do track all projects, including residential self-builds and extensions, our analysis has shown that projects over €500k/£500k and residential developments of 10 units or more represent, on average, over 90% of total project value with their sectors.
- **Project Values:** Project values are calculated by an in-house CIS cost calculator created with the help of QS and project costing professionals. Projects values are based on shell and core construction costs calculated by using various metrics such as floor area, housing units, road lengths. Factored into the calculations is the type of build and the location of the build
- The figures on starts shown here represent gross figures. Phased developments are not taken into consideration when commenting on project starting
- **“Pipeline”** refers to projects that have been granted planning permission. Dates used are the Planning Decision date as opposed to the Final Grant date
- **“Starts”** refer to projects that began in the period under consideration as confirmed by CIS research team
- **Rolling Three Month Averages** are a standard method of smoothing out spikes measures over time by taking an average of the aggregation of the previous three months
